Education

Thapar Institute Of Engineering and Technology	Patiala
Bachelor of Engineering in Electronics and Communication Engineering	2022 – 2026
CGPA: 8.85	
Shalom Hills International School	Gurugram
CLASS XII (PCM with CS) CBSE 95.8%	2020 – 2021

Experience

Yum! Brands – Digital Food Platform	Gurugram
Machine Learning Engineer Intern	January, 2026 – Present
– Built production scheduling for AI-agent workloads on Kubernetes, combining CronJobs for recurring runs with Redis-backed one-time jobs, retry handling, and idempotent execution across worker replicas. – Built Kubernetes deployment workflows for agents and multi-agent services using FastAPI and Helm, supporting create, redeploy, and undeploy lifecycles with isolated routing. – Shipped asynchronous LLM usage and cost processing with a Redis-backed queue, background retries, and durable run records so user-facing chat stayed off the critical path. – Integrated Model Context Protocol across local and remote transports and fixed a shared-configuration concurrency bug with request-scoped copies. – Optimized a MongoDB conversation-list API with projection and compound indexing, reducing payload by about 99% and bringing latency below 500 ms.	

Skills

Languages: Python, Go, C, SQL
Frameworks & Libraries: FastAPI, PydanticAI, MCP, JWT
Databases & Caching: MongoDB, PostgreSQL, Redis
Tools: Git, Docker, Kubernetes, Helm, GitLab CI/CD, Linux, SQLC, Goose
Coursework: Data Structures & Algorithms, OS, DBMS, OOP, AI, Computer Architecture
Certifications: HTTP Clients in Go, Learn Linux, Learn OOP in Python, Learn Go

Projects

Deputy Python, Ollama, MCP, sqlite-vec, FastAPI	GitHub Demo
– Built a private on-device AI agent: a bounded ReAct loop with constrained decoding that lifted end-to-end task success 29%→88% on qwen2.5:3b (schema-valid steps 71%→100%), with tools exposed over MCP. – Added on-device RAG (sqlite-vec + Ollama embeddings) and a trust surface — approval gates for writes and external access, an append-only audit log, and local-first routing with opt-in cloud; local FastAPI UI, reproducible eval harness, strict mypy.	
Chirpy Go, PostgreSQL, JWT, SQLC, Goose	GitHub
– Built a REST API in Go for a micro-blogging platform with JWT auth, Argon2id hashing, and middleware for logging, validation, and error recovery. – Designed a PostgreSQL schema with SQLC + Goose (5 migrations, 20+ queries); added Chirpy Red premium upgrades via webhooks.	
JobOps Pipeline Python, Google Sheets API, asyncio/httpx, LLM APIs	GitHub Demo
– Built a daily job-ops pipeline that orchestrates Sheet sync → parallel fetch across 15+ job boards and ATS APIs → fresher/geo/salary filters → tiered scoring → bidirectional Google Sheets CRM. – Implemented dedup by URL plus company/role/location collapse; optional LLM JD enrichment (Gemini/OpenAI) extracts stack/YOE and auto-picks resume variant; cached in <code>.jd_cache.json</code>. – Added outreach step: Hunter.io contact lookup, per-role cold-mail drafts, and company referral DMs — review-before-send workflow (never auto-sends).
